#### Introduction

Coronavirus disease 2019 (COVID-19) is an infectious disease caused by a new type of coronavirus: severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). The outbreak first started in Wuhan, China in December 2019. The first kown case of COVID-19 in the U.S. was confirmed on January 20, 2020, in a 35-year-old man who teturned to Washington State on January 15 after traveling to Wuhan. Starting around the end of Feburary, evidence emerge for community spread in the US.

We, as all of us, are indebted to the heros who fight COVID-19 across the whole world in different ways. For this data exploration, I am grateful to many data science groups who have collected detailed COVID-19 outbreak data, including the number of tests, confirmed cases, and deaths, across countries/regions, states/provnices (administrative division level 1, or admin1), and counties (admin2). Specifically, I used the data from these three resources:

- JHU (https://coronavirus.jhu.edu/)
  - The Center for Systems Science and Engineering (CSSE) at John Hopkins University.
  - World-wide counts of coronavirus cases, deaths, and recovered ones.
  - https://github.com/CSSEGISandData/COVID-19
- NY Times (https://www.nytimes.com/interactive/2020/us/coronavirus-us-cases.html)
  - The New York Times
  - "cumulative counts of coronavirus cases in the United States, at the state and county level, over time"
  - https://github.com/nytimes/covid-19-data

- COVID Tracking (https://covidtracking.com/)
  - COVID Tracking Project
  - "collects information from 50 US states, the District of Columbia, and 5 other US territories to provide the most comprehensive testing data"
  - https://github.com/COVID19Tracking/covid-tracking-data

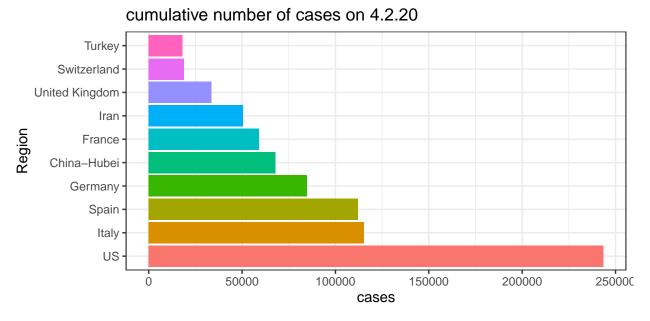

#### JHU

Assume you have cloned the JHU Github repository on your local machine at "../COVID-19".

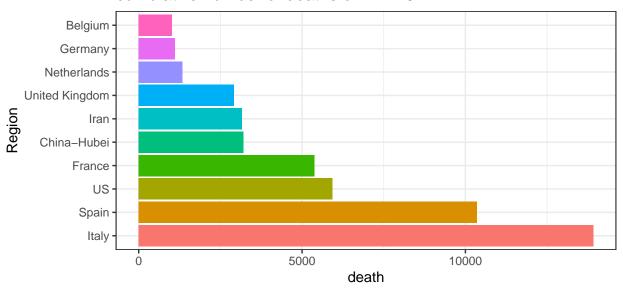

#### time series data

The time series provide counts (e.g., confirmed cases, deaths) starting from Jan 22nd, 2020 for 253 locations. Currently there is no data of individual US state in these time series data files.

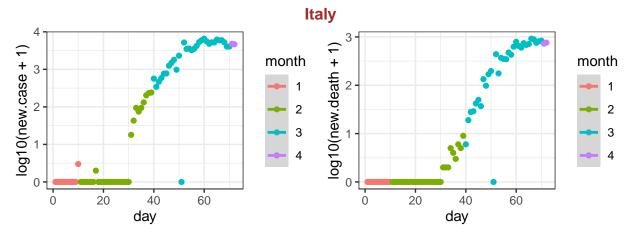

Here is the list of 10 records with the largest number of cases or deaths on the most recent date.

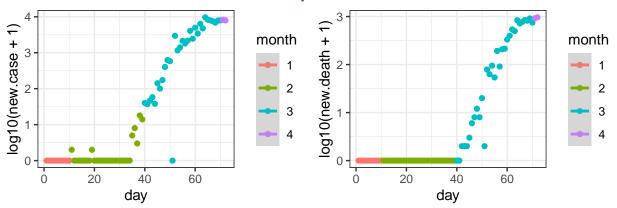

## cumulative number of deaths on 4.2.20

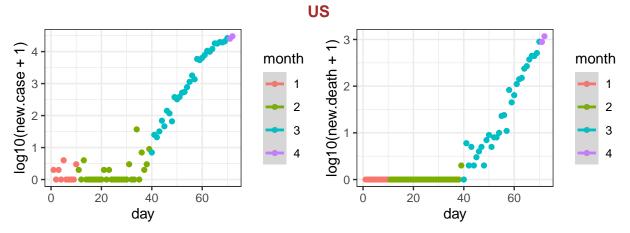

Next, I check for each country/region, what is the number of new cases/deaths? This data is important to understand what is the trend under different situations, e.g., population density, social distance policies etc. Here I checked the top 10 countries/regions with the highest number of deaths.

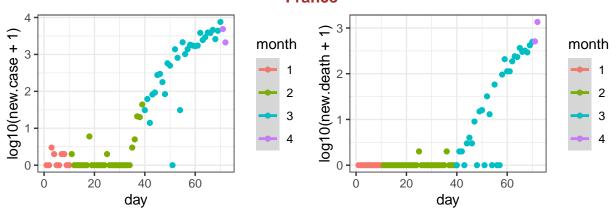

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020 **Spain** 

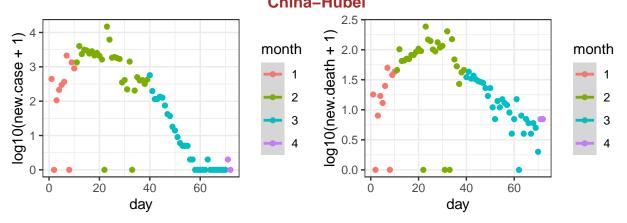

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020

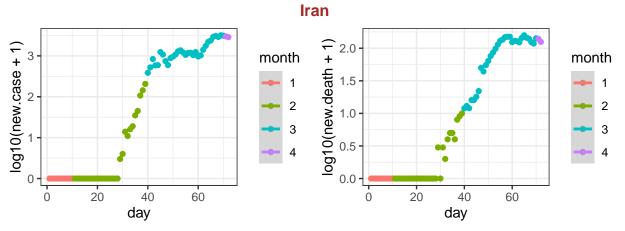

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020 **France** 

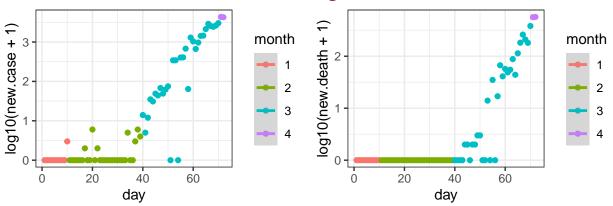

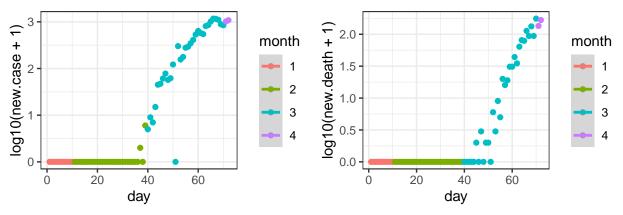

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020

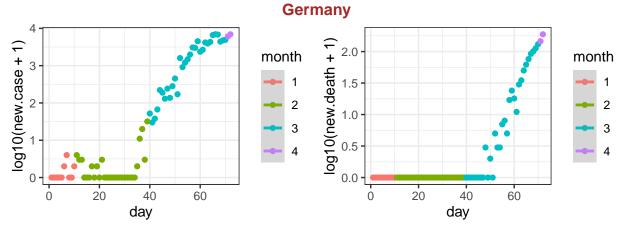

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020 **United Kingdom** 

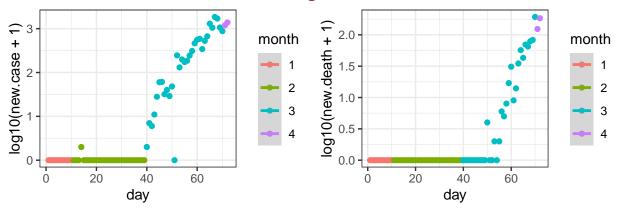

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020 **Netherlands** 

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020

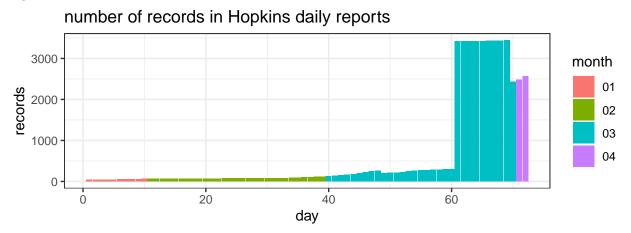

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020 **Belgium** 

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020

#### daily reports data

The raw data from Hopkins are in the format of daily reports with one file per day. More recent files (since March 22nd) inlcude information from individual states of US or individual counties, as shown in the following figure. So I turn to NY Times data for information of individual states or counties.

data source: https://github.com/CSSEGISandData/COVID-19, day 1 is 1/22/2020

## **NY** Times

The data from NY Times are saved in two text files, one for state level information and the other one for county level information.

The currente date is

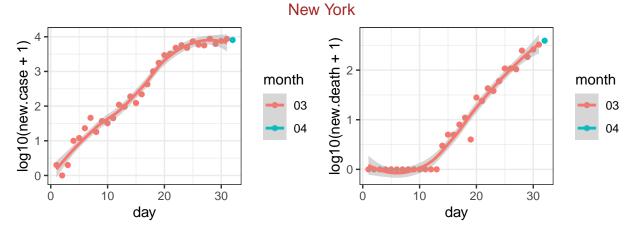

## [1] "2020-04-01"

#### state level data

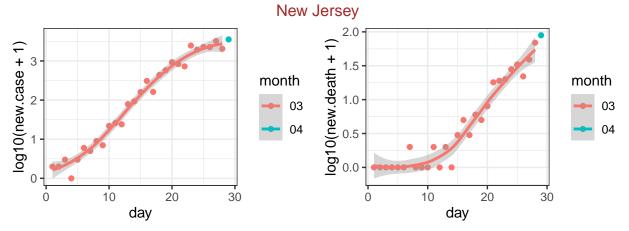

First check the 10 states with the largest number of deaths.

##		date	state	fips	cases	deaths
##	1643	2020-04-01	New York	36	83889	1941
##	1641	2020-04-01	New Jersey	34	22255	355
##	1633	2020-04-01	Michigan	26	9293	336
##	1629	2020-04-01	Louisiana	22	6424	273
##	1661	2020-04-01	Washington	53	5588	249
##	1614	2020-04-01	California	6	9816	212
##	1620	2020-04-01	Georgia	13	4748	154
##	1624	2020-04-01	Illinois	17	6980	146
##	1632	2020-04-01	${\tt Massachusetts}$	25	7738	122
##	1619	2020-04-01	Florida	12	7765	100

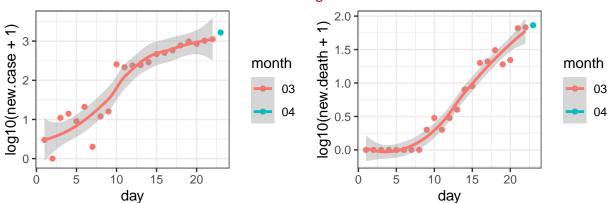

For these 10 states, I check the number of new cases and the number of new deaths. Part of the reason for such checking is to identify whether there is any similarity on such patterns. For example, could you use the pattern seen from Italy to predict what happen in an individual state, and what are the similarities and differences across states.

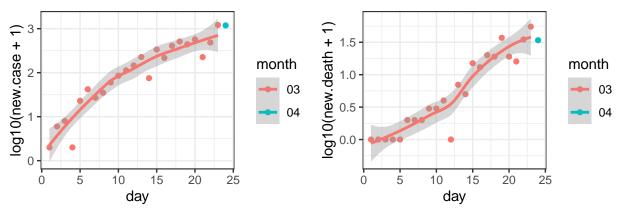

data source: https://github.com/nytimes/covid-19-data, day 1 is 03-01

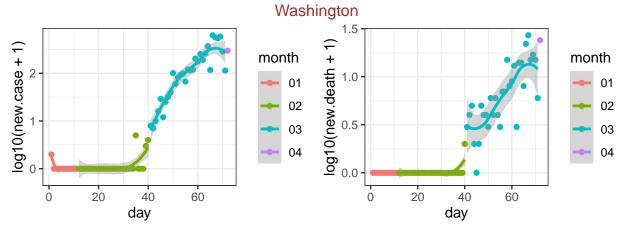

data source: https://github.com/nytimes/covid-19-data, day 1 is 03-04 Michigan

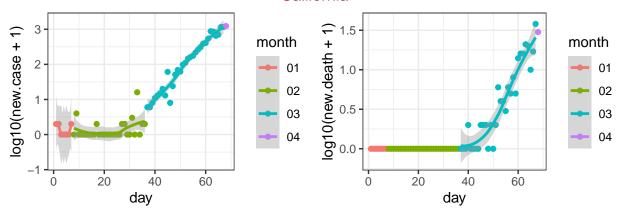

data source: https://github.com/nytimes/covid-19-data, day 1 is 03-10 Louisiana

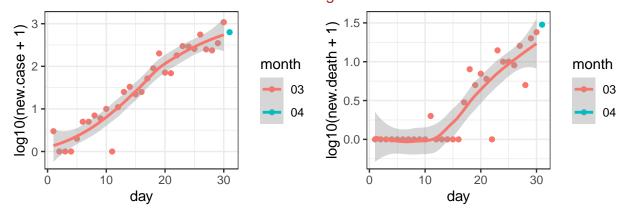

data source: https://github.com/nytimes/covid-19-data, day 1 is 03-09

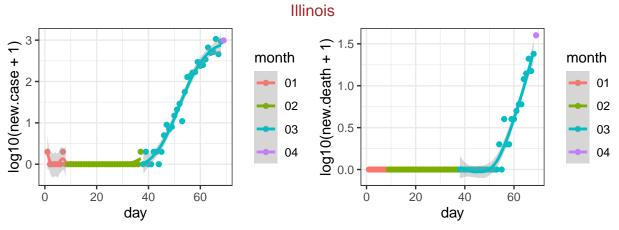

data source: https://github.com/nytimes/covid-19-data, day 1 is 01-21 California

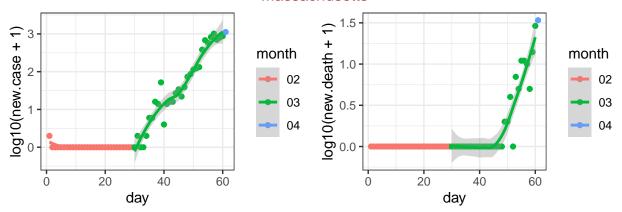

data source: https://github.com/nytimes/covid-19-data, day 1 is 01-25 Georgia

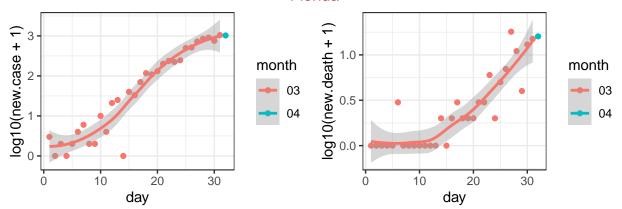

data source: https://github.com/nytimes/covid-19-data, day 1 is 03-02

data source: https://github.com/nytimes/covid-19-data, day 1 is 01-24
Massachusetts

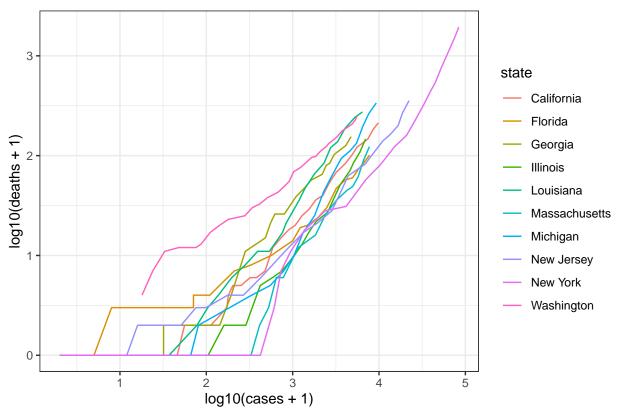

data source: https://github.com/nytimes/covid-19-data, day 1 is 02-01 Florida

data source: https://github.com/nytimes/covid-19-data, day 1 is 03-01

Next I check the relation between the  $\mathbf{cumulative}$  number of cases and deaths for these 10 states, starting on March

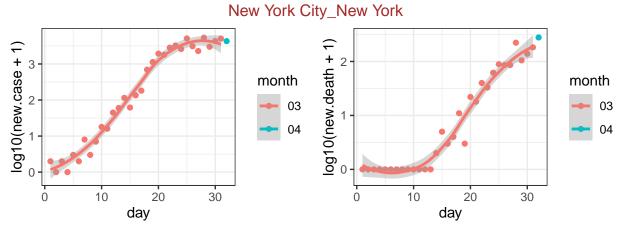

data source: https://github.com/nytimes/covid-19-data

## county level data

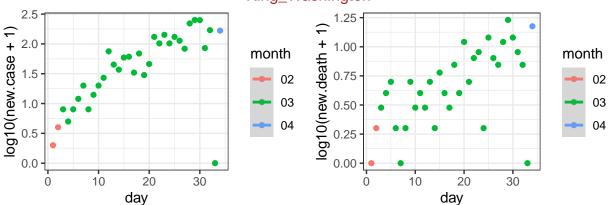

First check the 10 counties with the largest number of deaths.

##		date		county	state	fips	cases	deaths
##	25298	2020-04-01	New	York City	New York	NA	47440	1374
##	26085	2020-04-01		King	Washington	53033	2498	166
##	24955	2020-04-01		Wayne	Michigan	26163	4470	146
##	24808	2020-04-01		Orleans	Louisiana	22071	2270	115
##	24937	2020-04-01		Oakland	Michigan	26125	1910	99
##	24469	2020-04-01		Cook	Illinois	17031	5152	95
##	25297	2020-04-01		Nassau	New York	36059	9555	76
##	25228	2020-04-01		Bergen	New Jersey	34003	3494	75
##	25233	2020-04-01		Essex	New Jersey	34013	2262	69
##	25317	2020-04-01		Suffolk	New York	36103	7605	69

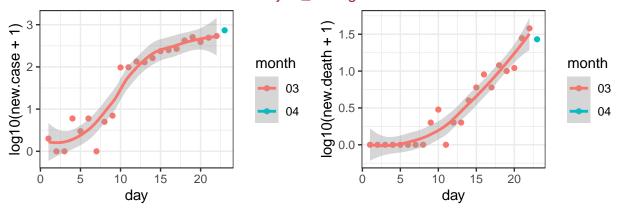

For these 10 counties, I check the number of new cases and the number of new deaths.

# **COVID Tracking**

The positive rates of testing can be an indicator on how much the COVID-19 has spread. However, they are more noisy data since the negative testing results are often not reported and the tests are almost surely taken on a non-representative random sample of the population. The COVID traking project proides a grade per state: "If you are calculating positive rates, it should only be with states that have an A grade. And be careful going back in time because almost all the states have changed their level of reporting at different times." (https://covidtracking.com/about-tracker/). The data are also available for both counties and states, here I only look at state level data.

Since the daily postive rate can fluctuate a lot, here I only illustrate the cumulative positave rate across time, for four states with grade A data. Of course since this is an R markdown file, you can modify the source code and check for other states.

github.com/COVID19Tracking/, cumulative positive rate on 0402: 0.08(WA) 0.09(TX) 0.39(NY) 0.06(NC)
